Frank Morrison Dies Suddenly At His Home

The whole community was terribly shocked on Sunday afternoon at the sudden passing of Mr. Francis Morrison at his home in Mirror. Mr. Morrison had been in the best of health and had addressed the Union S.S. at noon. He was taken ill on leaving the church and on arriving home lay down to rest. Some little time later he was discovered by his wife to be sleeping his last sleep.

Francis Morrison was born Jan. 9th, 1872, in Ernestown, Ontario. His parents were of Irish Protestant stock, and Frank was the youngest of a family of four, of whom two survive him, his oldest brother, John, who resides at Odessa, Ont., and Robert, an engineer on the Southern Pacific at San Antonio, Texas. His sister predeceased him years ago, also his father and mother. His father died exactly forty years previous to his son and on the same day. Mr. Morrison is survived by his widow, Marjorie Baker, and one daughter, Mrs. Charles Sarles and grandson, Norwood Sarles.

Mr. Morrison entered on his duties with the railway as an engineer on October 3, 1912, where he served continuously until his death. Among his fellow workers he was universally respected for his sterling qualities and christian character, his life being a constant example of the faith in which he believed.

The funeral service was held at 1 p.m. on Tuesday from the Union Church, the remains being borne to the church by twelve pall bearers, all members of the I.O.O.F., preceded by six honorary pall bearers: L. Norton, J. W. Spiece, J. E. Flewelling, C. R. Brewster, J. Trotter and R. Conway. The beautiful floral tributes bore striking testimony to the esteem with which he was held in the community. The service was conducted by Rev. R. G. Wood who bore testimony to the great love and regard in which Mr. Morrison was universally held, taking as his text, "Mark the Perfect Man and behold the upright for the end of that man is peace."

A quartette of Messrs. Flewelling, McCormack, McNair and Hutchins rendered "Abide with Me" while Mr. Hutchins sang as a solo "The Holy City". The church was quite unequal to holding the friends who came to pay a tribute of respect to the deceased. The remains were taken on the 2.15 train to Kingston where interment will take place on Monday in Cataract cemetery. They were accompanied by the widow, daughter and Mr. C. Sarles and son.

The sympathy of the whole district goes out to the bereaved widow and family in their sudden loss and to the societies who lose such a valued member.

Wedding Bells

A quiet wedding was performed at Mirror on Monday last by Rev. Mr. Morgan when Miss Mae Ball became the bride of Mr. Frank Horegood. Following the ceremony the young couple boarded the north train for Edmonton and other points

Human Flies Scale C.P.R. Chimney

Walking around a two-foot-wide platform that encircled the top of the 218-foot-high chimney at the end of the Windsor street station train platforms, Henry Held, of New York, and Richard Boucher, of Three Rivers, drew many eyes from neighboring streets and from the windows of the C.P.R. offices. The men had been engaged by the company to repaint the bricks, clean the surface and repair the lightning rods on the huge chimney.

The work of getting the platform to the top of the chimney occupied the men for eight days. Every upward movement of the platform was to a height of six feet and at the last minute of completing this work one of the men would be standing on a single plank, the rest having been raised to the upper position. This ticklish work was to the onlooker dangerous in the extreme, but the men thought nothing of it. Asked if he ever suffered from attacks of vertigo, Held laughed and said he never had. "I feel just as safe up there as I do on the ground," he is a man over sixty years of age and has been doing this kind of work for the past forty years. "I feel right at home on the C.P.R. chimney," he added, "for I built it in 1912." However, he is thinking of quitting in another couple of years, although his nerve is as good as ever it was. He owns a half-section of land in Alberta and it is there that he says he will settle down.

Both men moved with the same ease at the perilous height as though they were walking on the street. At times, when hauling a plank upwards, one of them stooped over the edge of the platform looking sheer down the drop of 200 feet. At other times they swung out from the walls of the chimney perched on a tiny cradle. At all times they appeared to have complete mastery of the situation.

Although it took them eight days to hoist the platform to its present position, they glided from it to the ground on a cradle in slightly less than a minute.

International Ignorance

Ignorance and misunderstanding among the nations cause more trouble than the machinations of political leaders, who are blamed for so many of the world's ills. Democratic government, says a Japanese former minister of education, has reached a state that the few well-informed men of international outlook in any country are overwhelmed by the weight of passion, prejudice, and the unreasoning fear and ignorance of the masses. He ascribes the present mischiefs of the world, in nine cases out of ten, to international ignorance and stupidity, and the same cause he assigns as the chief reason for the strained relations which have existed in recent years between the United States and Japan.

This Japanese statesman holds that the greatest need in the development of a better understanding between these two countries is more publicity; the printing by the papers of both countries of more news—more sympathetic news—of happenings in the other country, and a sympathetic interpretation of it. He advocates cheaper radio and cable tolls which, he states, would be an inestimable aid in bringing about the consummation of this campaign of education against the great and always present danger of national ignorance.

Undoubtedly one of the reasons for the sympathetic and good relations existing between the United States and Canada is that we understand each other, on understanding brought about by a common language, the free exchange of newspapers and periodicals of all kinds, free intercourse across the border by mail, telegraph, telephone, radio, automobile and train. While maintaining separate nationalities and quite different national ideals, and with no thought of political union, there nevertheless exists the closest ties of friendship and understanding so that the mere thought of war is absurd and impossible.

The secret is that we understand each other, and that understanding is the outcome of knowledge of each other. Each nation is able to see the other's viewpoint. If, instead of this knowledge, the two great groups of people dividing the North American continent between them were steeped in ignorance of each other, there would be constant friction.

One of the sources of strength possessed by the British Empire is the knowledge which each component part has of the other parts. Statesmen have always recognized the importance of the rapid and continuous dissemination of information throughout the Empire and every encouragement has been given to the provision of inter-empire means of communication by cables, steamships, lines, imperial penny-postage, and in these later years by the development of aerial communication. Not the least of the advantages of the periodical Imperial Conference is the discussion and understanding of Empire problems which result and from which understanding comes.

So, too, in the annual gatherings of the League of Nations Assembly, and the frequent meetings of the Council of the League and its many committees, is to be found one of the greatest of all preventative of future wars. These meetings bring about mutual understanding and dispel ignorance and prejudice. Only recently one of the outstanding dangers in the public life of Germany of today declared that had there existed the same machinery for consultation between the nations prior to 1914 no war is now provided by the League of Nations, the Great War would never have been fought.

The need of the whole world is greater knowledge,—that is greater international knowledge. Fortunately, the trend of modern inventions is to facilitate the dissemination of such knowledge and to promote world travel and international intercourse.

Depending for a moment on the international aspect of this fundamental question of knowledge versus ignorance, it will readily be appreciated that the same truth has equal force when applied to Canada itself. Any weakness in our national position today is to be found in a lack of complete understanding between the different parts of the Dominion, in the fact that Maritime Province conditions are not as fully understood and appreciated in Ontario and the West as they ought to be, and because in Ontario and down by the Atlantic seaboard it is difficult for them to visualize and grasp our Western problems.

In the development of that much to be desired knowledge of each other every possible agency should be employed,—through the press, by means of national conventions, encouragement of tourist traffic within the Dominion, in which good roads, railways and even airplanes will play their part. The replacing of ignorance by knowledge will do more than anything else to create a strong and united Confederation, just as certainly as it will remove causes of international misunderstandings and friction which lead to war.

Holds "Great War" Sale

Criticism Dipping of Leftover Properties Worth Millions

England will finish one of the biggest jobs of salesmanship ever undertaken by a single government when \$1,000,000,000 worth of property from practically every former fighting front of Europe will be disposed of about March 1st.

Lands, buildings, factories, railway materials, foodstuffs, horses, hay, and other supplies, and a host of other items are included in the list of properties left over from the government at the close of the war.

The commission in charge of selling began its work in 1919 with a staff of 47,000 men. Five hundred handling the final phases of the job.

John Bunyan's First Book

Story for Boys and Girls Now in Harvard Library

A forty-four page edition of John Bunyan's "A Book for Boys and Girls," of which there is only one other known copy in the world, has been presented anonymously to the Harvard Library. It has been announced by George P. Winship, in charge of the treasure room. The book was discovered by Miss Miller, a postal employee in Hemel, Hants, England, and was auctioned off to a London book dealer for \$10,550. The book, which was published in 1688, is being given in memory of Lenel De Jersey, Harvard 15, who was killed in action in France during the Great War.

Mr. Nouveau (explaining his new radio set): "Yes, the waves ain't sound waves or electric waves—they're ether."

Mr. Nouveau (correcting him): "By the George."

To Encourage Fur Farming

Marsh Lands in Saskatchewan Now Available for This Purpose
 Negotiations between the Saskatchewan and Dominion governments regarding the leasing of marsh lands for fur farming purposes have now been completed and arrangements are being made by which the provincial authorities will lease certain crown lands for fur farming purposes. Hon. C. M. Hamilton, minister of agriculture, has announced.

Large areas of marsh lands owned by the crown are available for fur farming in the northern part of the province, but the area of such land in the south is relatively small, the water courses being more or less limited and homesteading having been carried on extensively.

Completion of the negotiations between the Federal and provincial governments means that applications may now be received by the Saskatchewan authorities from individuals desiring to take up such lands for fur farming.

For Aches, Pains, The Safe Home Remedy NERVILINE

When rubbov sickness comes, when the hidden cause in with colds, their little chills and shivers start from coughing, quick results always follow a vigorous rubbing with good old NERVILINE. If it's Croup, Colds, Diphtheria, NERVILINE is a wonderful friend. It brings ease and comfort so quickly. For young and old, to overcome the minor ills that constantly arise in the home, NERVILINE compares with "Nervine"—35 cents at all dealers.

Banboo is the latest material for making paper. Bamboo, long regarded as a weed in India, has become an important commercial product.

REGAINED HEALTH IS NOW HAPPY

The Experience of a Quebec Woman With Dr. Williams' Pink Pills

Mrs. L. D. Bernier, 88 D'Armenville Street, Montreal, who is the wife of a woman who, when she found her health failing, resorted at once to Dr. Williams' Pink Pills, and how kind and perfect health. Mrs. Bernier says: "I was very weak, subject to headaches and was unable to sleep. I was very nervous and was persuaded me to try Dr. Williams' Pink Pills and the result has been most satisfactory. I have regained my health, the headaches have left me; I sleep well at night, and I have gained in weight. Naturally I am feeling happy. I strongly recommend Dr. Williams' Pink Pills to all weak people."

Try Dr. Williams' Pink Pills for anemia, rheumatism, neuritis, nervousness. Take them as a tonic and are not in the best physical condition and cultivate a resistance that will keep you well and strong. If you will send us your name and address a little book, "Building Up the Blood," will be mailed you. This little book contains many useful health hints. You can get these pills through any dealer or by mail at 50 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

New Discovery Is Important

X-Ray Films Reveal Processes of Human Body

A method of taking X-ray films of the processes of the human body has been discovered by three British scientists, it was declared. The problem, which has long baffled American and European scientists, has been solved by Frederick McVillie, radiologist at the University College of London, and E. E. Wardlaw and E. W. Edwards of the British Instructional Film Company.

As a result of this new invention the public soon will be able to see films showing the beating of the heart, the respiratory movements of the lungs and the various stages of the digestion of food.

The method is said to be precisely the same as when ordinary motion pictures are taken, except that X-rays are used. The scientists, however, do not disclose the secret of the method, by which, as the sequel of two years' experimentation, they have overcome the difficulty of obtaining sufficiently strong illumination without injuring the skin of the subject.

The discovery is declared to be of the greatest importance from a medical viewpoint both for teaching and research. Physiologists will be able to obtain exact information about many processes which thus far have been judged only by inference.

Many mothers have reason to bless Mother Graves' Worm Expeller, because it has relieved the little ones of suffering and made them healthy.

A chemist of Dunstable, New Zealand, has discovered a process for cleaning wool badly stained by branding. This method such stains have been eradicated.

Breeding—Use Minard's Liment.

MAGIC BAKING POWDER

Huge Amount Left By Auto Tourists

Canada Reaped \$191,000,000 During First Ten Months of Last Year

Automobile tourists from the United States entering Canada during 1926 left a gross revenue to the people of the Dominion of about \$191,000,000, according to a careful estimate made by A. W. Campbell, Dominion Commissioner of Highways. In 1925 the estimated gross revenue from this tourist traffic was \$188,555,000. The latter figure, however, was for the twelve months, while the figures on last year's business was not complete, and only for the ten months ending with October, so that the increase for the entire calendar year of 1926 will show an even larger advance over 1925.

From Jan. 1 to Oct. 31-1926, the numbers of United States cars entering Canada at Customs ports of entry for touring purposes were as follows: Under the twenty-four hour period, 1,240,000; ordinary gross revenue from these, \$27,252,150. Thirty-day period permits, 539,712 cars; revenue, \$103,222,600. Six-month period, 4,003 cars; revenue, \$7,255,400.

An indication of the extent of the increasing United States automobile tourist traffic is furnished in 1925 the totals at the principal entry stages into British Columbia, over the Los Angeles-Vancouver Highway: 10,000 cars; Lord Selkirk Highway: at Emerson, Twin Cities to Winnipeg, 6,000 cars; Sea, 6,000 cars; Santa Port and Port Huron, 50,000 cars; Detroit, 90,000 cars; Niagara Falls and Bridgeburg, 820,000 cars; Kingston, Prescott and Brockville, about 15,000; St. Lawrence River or Quebec Province, about 450,000 many of which came for the one-day period, as only a narrow river bridge.

The explanation offered as to the large number of cars entering at the Niagara border compared with the small number at Quebec points is that there are many sightseers at Niagara Falls and many commercial transactions between United States and Canadian towns and cities there.

Alberta Fur Catch Good

Money Value for Year Totals Over Two Million

Two million dollars and something over represents the money value of Alberta's fur production for the far year of 1925-26, according to figures just given out by the provincial game branch. The exact figures are \$2,122,735 as compared with \$2,039,174 for the year before. Only 35 fur caught within the province are included in these totals, those taken in the Macleaze country not being counted, at though they go to market via Edmonton.

For Both House and Stable.—There is a good deal of similarity, physically speaking, between human beings and the lower animals. Both are subject to many ailments arising from inflammation and to all manner of cuts and bruises. Dr. Thomas' Electric Oil is an entirely reliable remedy for such ailments and mishaps in both human beings and the lower orders of animals.

Wife—"The maid has just given notice, she says she's leaving me, intending to her over the telephone, yesterday."

Husband—"Great Scott! I thought I was speaking to you."

The average level of the cost of living in Great Britain on the first of October, 1926, was 74 per cent, above that of July, 1914.

Crank—"How did you cure your wife of her analagous cranks?"

Shut—"Oh, I just gave her a 1907 model automobile for her birthday."

Will Make Good Aviator

Fourteen Year Old Iowa Boy Makes 300 Mile Flight Alone

But a few years ago when a boy in the early teens could "hook" from school, he was usually expected to be found slating on a neighborhood pond or at the worst hunting cotton-tails with an air rifle. But today the Tom Browns and Huebuckers of Flinn are of a more adventurous nature.

Lawrence Koons, 14, of Iowa, is at court. For while Lawrence's Den Moines teacher was marking him absent from his junior high school classes the other day, Lawrence was making a trip to Omaha and back in an airplane, alone.

Although the boy piloted the plane alone, making the round trip of 300 miles in three hours, Lawrence appeared to think nothing of the feat. He took his teacher a note the following day to the effect that he had been away "on business." The young pilot's grand consisted of delivering a message to Ray Peterson, Des Moines aviator, to a farmer, and returning immediately with an answer.

Lawrence began learning to manipulate a plane only six months ago, but he has become so proficient that he expects to pay his way through college as an aviator. If he continues as he has begun, his success is assured.

Britain Reducing War Debt

Since June 1923, Has Paid \$42,830,000 to United States

Sir A. Maurice Low, Washington correspondent of a London daily newspaper, sent a dispatch to his newspaper in which he called attention to the fact that Great Britain already had paid \$42,830,000 to the United States in carrying out the agreement made in 1923 for the funding of the British war debt to the United States. He indicated also that inquiries made by him at the British Embassy had demonstrated that there was no intention on the part of His Government of asking to be excused from carrying out its obligations.

"Payments began in 1925, when on June 15 \$10,000,000 was paid on account. On December 15, a similar amount was paid, and \$25,000,000 on principal. In 1921 two payments of \$8,555,000 each were made on interest, and \$20,000,000 on principal.

"In 1925, semiannual payments for interest were \$5,110,000 and \$24,000,000 for principal. This year the interest payments have been, semiannually, \$5,750,000, and the payment on principal has been \$25,000,000.

"Summed up to date, Great Britain has paid to the United States \$42,830,000 as interest and the debt has been reduced by \$55,000,000.

Miller's Worm Powders will drive worms from the system without injury to the system. This powder acts so fast that the most delicate stomach can assimilate them and will come them as speedy cures of pain, because they promptly remove the worms that cause the pain, and thus the suffering of the child is relieved. With so sterling a remedy at hand no child should suffer an hour from worms.

"From the other end of the earth—"

We would send for Zam-Buk," writes Mrs. J. C. Lemon of 1102, East Broadway, Glendale, Calif., U.S.A. "In Ontario 20 years back we used and love to look up on with us into Michigan. Now we have Zam-Buk sent to California.

"Zam-Buk is proved a sure remedy for skin troubles. I recall how when we lived in Canada my daughter burnt her face badly against the snow. Zam-Buk healed the sore in a few days. On another occasion my husband injured his foot. The wound went the wrong way had blood poison made the flesh purple. When we got Zam-Buk on to his foot it soothed, cleansed and healed it in very short time. Promptly used, Zam-Buk prevents burns going deeper, and its antiseptic qualities are a rare guard against infection.

"Zam-Buk has done good in so many instances in our family that we can't say how we would get along without it."

-We would send for Zam-Buk-

Wherever skin is hot, burnt, sore, inflamed or "itching" to any way, Zam-Buk is always the best and most useful remedy. Send for the box 3 for 25¢ all dealers.

Says Japan Will Disappear

Geologist Predicts Islands Will Be Submerged in Pacific

As though Japan has not had enough trouble with her earthquakes, Levis Noble, of the United States Geological survey, says the Japanese islands will eventually disappear completely below the waters of the Pacific.

Japanese scientists reveal the fact that an island in Kyushu bay vanished 360 years ago, drowning 5,000.

However, Japan may not stay above water longer than some other countries. Scientists show that South America, not so long ago, as geological periods go, was completely under water. The chalk cliffs of England were manufactured by tiny marine creatures at the bottom of the sea. And you find oyster shells on high mountains, lifted up from the ocean's bottom.—New York American.

The Proven Asthma Remedy. Since asthma existed there has been no lack of much heralded remedies, but they have proved their inefficiency. The ever-growing reputation of Dr. J. D. Kellogg's Asthma Remedy has given it a place in the field of medicine which no other can approach. It has never been pushed by sensational methods, but has simply gone on effecting relief and making new converts.

Letter Was Delivered

A remarkable incident has been reported—the case of a child at Houston, Texas, who addressed a letter to Santa Claus to Northland, Canada, and the episode through the offices of the American and Canadian postal employees, reached Northland on the A.C.R., 24 miles north of the Soo.

For Rheumatic Pains.—The pains and aches of Sciatica and Rheumatism should be treated with Dr. Thomas' Electric Oil. The soothing and healing properties of this famous remedy have been demonstrated for fifty years. Use it also for inflammatory pains of all kinds, such as sprains, strains, ether-in human beings or the lower animals.

Magistrate—"You say he said you had the face and habits of a monkey, and that he could make a better man than you out of chewed string? What happened then?"

Victim—"E then became abusive."

Singapore Needs Huge Garrison

Britain Warned: New Naval Base Requires 50,000 Men

More than 50,000 men will be needed to defend Great Britain's proposed enlarged naval base at Singapore, which Parliament recently authorized, and for which a \$50,000,000 floating dock is already under construction.

A warning to that effect is issued to the Government by a "distinguished soldier" in the Conservative weekly, the Spectator. This authority bases his argument on the experience of Russia, which, with a garrison of 17,000, was unable to hold Port Arthur against the Japanese.

"Where are we to find these men for such a garrison?" he asks.

"This answer sounds utterly fantastic, but yet it must be given. As soon as there is any risk of hostilities we should have to mobilize our expeditionary force and send relays of it week by week. This would mean making ourselves incapable of defence action in Europe. It would also paralyze our naval force. The transport of troops would swell up our sea power, for we could not leave the Singapore garrison and the dock in the air."

The Spectator answers what it calls "this nightmare" by saying that since Singapore cannot be held by England it must be held by the Empire.

"The fact that the Dominion Prime Ministers before they separated considered the problem of Singapore and discussed how far they are concerned therein in every way satisfactory," the paper says. "It shows the Imperial importance of the matter is fully admitted."

Rather than leave Singapore undefended, the paper says, it should be carried, as it were, to Australia, where it would be perfectly secure from attack.

"The problem of Singapore is an Imperial problem and must be considered and decided on by our federation of British nations as a whole not by one of them alone," it says.

But the paper goes on to speak of the racial consciousness of the English-speaking nations and suggests that America, as the power in control of Hawaii and the Philippines, seize the opportunity of establishing a "coastline form of the United States" in the Far East. This is virtually an invitation for a united stand against Japan, which would be regarded, as was Spain, 100 years ago.

Roughages For Steers

Alfalfa Should Be Supplemented With Other Feeds

Results of extensive feeding trials of steers at the Lethbridge, Alta., Experimental Station indicate that alfalfa hay, when supplemented with roughages which tend to vitiate nutritive value, and tend to reduce the value of the ration, such as corn, fodder, corn silage, or silage, sunflower silage, roots and cut straw, will produce greater gains than when alfalfa is fed as the sole roughage. Of all these supplementary roughages corn fodder was found to be the most economical.

The average cost of producing a pound of gain during feeding trials conducted at the station for five years when alfalfa was the only roughage used was 11.14 cents, whereas when corn silage was used in conjunction with alfalfa the gains were produced at a cost of 12.09 cents per lb.

Heroes Are Made

Because he had crawled out on this fee and rescued a playmate who had broken through little Willie was the cause of a group of admiring men and women.

"Tell us, my boy, how you were brave enough to risk your life to save your friend," said one of the ladies.

"I had to," was the breathless answer. "He had my slates on."

Far Farms For Australia

Reports from Australia are to the effect that far farming is to be taken up seriously in that country. Native animals, such as the opossum, bear, kangaroo and wallaby, all of which produce valuable fur, will be raised chiefly. The fur of all these animals brings good prices and is in big demand.

Advantages of Fair Hair

Blondes are not only preferred by gentlemen, but, according to the famous surgeon, Sir W. Arbuthnot Lane, they are much harder. Pale-haired persons have enormous advantages over dark haired, he said. They seem to be able to fight against disease much better.

Magistrate—What did the defendant look like when you arrested him?
Constable—Well, sir, he had a set of punched look.

Peas For Grain and Fodder

Makes An Excellent Fodder Crop When Sown With Oats

The growing of peas has dropped to a low place on many Canadian farms. With a view to securing more productive varieties, the experimental farms have been crossing some of the sorts that were brought from years ago. More than thirty years ago a variety of exceptional merit was produced from a cross between Mummy and Black-eyed Marrowfat. A pure line selection of this cross-bred variety was given the designation of Mackay Ottawa Number 25. In comparative trial plots on practically all of the branch farms as well as at Ottawa, for several years, this sort has produced large yields both of grain and straw. The peas are creamy in color, but rather darker than most sorts and carry the black eyes of the old Marrowfat. This variety yields well both of grain and straw, making it an excellent fodder crop when sown with such varieties of oats as O.A.C. No. 72 which stand about the same as the best of the sorts to ripen. This mixture is giving excellent results in the form of hay for feeding to dairy cows and other stock. The Dominion cerealist announces in his report for 1925 available at the publications branch, Ottawa, that a large number of farmers were this year supplied with seed of this variety for testing on their own farms.

Agricultural Population

The Only Solution of Our Vexed Economic Problem

In spite of the fact that public policies in Canada have always, and to a starting extent, revolved around urban interests, the "big spots" in our economic picture will not be found in our towns and cities, but in our countryside. All our troubles would suddenly be over if Canada could today boast of a reasonably self-contained and prosperous agriculture, producing and consuming on double the present scale. That such a situation could be brought about within a limited term of years admits of no argument whatever. We have the "landless man," elsewhere they have the "landless man," the task of bringing them together is merely a question of intelligent business management and agricultural prosperity in the offing. If the average Canadian could create a state of mind which would consciously regard his task as the supreme responsibility of his government, not only would the entire life of the nation be changed, but the thing is done—W. Peterson, in the Ottawa Citizen.

Farmers Coming From U.S.

Indications Point to Increased Immigration Next Spring

The movement of United States farmers into Canada continues active, notwithstanding the lateness of the season, according to a statement issued recently by the department of immigration and colonization.

During November the Canadian Government agency at Fargo, North Dakota, forwarded 125 settlers and seven cars of effects, compared with 165 settlers and four cars of effects in November, 1925. For the same month the agency at Regina City reports an increase from four settlers in 1925 to 46 in 1926. The Detroit agency sent 69 settlers in November, an increase of 200 per cent. over November a year ago.

The department of immigration and colonization maintains 17 agencies in the United States, and forecasts point to a very active spring immigration from that country.

Has Proved a Success

The half-acre apple box—a package that was legalized a short time ago—has been tried out in the Vancouver market this season by the Associated Growers, and has met with much success. As in Quebec, the half-box has proved highly popular with small families and residents in apartment blocks, and it is expected that the introduction of the smaller box will lead to an increased purchase of apples.

Not Chicken Eaters

Canadian eat less than one chicken per capita in a year. Indeed, it is questionable if the average exceeds half a chicken each. Yet chicken is a most palatable and nutritious food. There may be several reasons for this low consumption, but the outstanding one is the comparatively poor condition in which table poultry reaches the consumer.

Farmers Use Most Horsepower Fifty million horsepower is used on farms of the United States, while only half that much energy is used by the other industries of the United States. In spite of this great available power in agriculture it requires 218 hours for the farmer to produce enough products to exchange for what is made in one hour in a factory.

Water For Cattle

Easily Accessible Supply Should Be Available At All Times During Winter

For the first few years that winter feeding of cattle was carried on at the experimental station at Rosyth, there was an inadequate water supply and that at some distance from the feeding corals. Later the water supply was convenient to the corals, but was available for the cattle only for a short time in the forenoon. For the past half dozen years the water has been stored in a large tank supplied with a heater, which keeps it from freezing and the cattle can drink when they wish.

When the water was at a distance from the corals they would have to be driven to water or they would wait till thirst compelled them. They would fill up with water, hump their backs and shiver, especially in cold weather, and not close their cud for an hour or more after drinking. When water was constantly available, the cattle were going to the water at all times, but taking only a few mouthfuls at once, and they did not hump their backs nor shiver, but began chewing their cud almost immediately.

A 14-inch self-lifting cast iron tank located on a hill for about ten dollars. Cud necessary to operate it will be from 5 to 10 pounds per day in cold weather.

Although there are no comparative records as to gains in cattle watered differently, yet the more comfortable and thrifty appearance of these cattle watered all times would seem to justify the extra expense many times over.

Honor In Regard To Debts

Many People Feel Under No Obligation To Their Creditors

"Mark Twain once wrote that a man should live such a life that when he died even the undertaker would be sorry. It is a difficult thing to do that, but one way to come near it is to keep all debts paid. Many people have no conception of that course, as a road to popularity and respect. Many of them leave no honor in regard to debts. They think that if they can get out of paying them that is much ahead. That is one of the outstanding failures of character. Those who habitually pay up, whose honesty is signified by one hundred cents on the dollar, have a clear conscience and an outlook on life that overcomes most troubles and disappointments. If the whole community were composed of such individuals there could never be any question as to its complete success."

Prison Warden—"I want to see Mr. Jones, the banker, who was sentenced last week. Where can I find him?"

Warden—"The cashier's cages are to the left, madam."

Increase In Pensions Paid

Granting of Retroactive Awards Cost Canada \$1,500,000 More

The total liability of the Dominion Government under the Pensions Act (Great War) for the year ending March, 1925, was \$2,666,471, the report of the board of pensions commissioners, tabled in the House of Commons, shows. This is an increase over the amount paid the year before of about \$1,500,000. "This increase," the report says, "is to be attributed to various factors, among which may be mentioned that in a number of disability cases the applicants were, on the evidence submitted, entitled to retroactive pension from date of discharge from the forces; that the statutory time limit in which to file a claim for pension was extended by parliament to seven years from the date of discharge and no judgments of the federal board reversing decisions of the board of pensions commissioners that injury or disease, or the aggravation thereof, resulting in disability or death, was not incurred during military service."

The total number of disability pensions to war veterans was 46,285 at the end of March, and the number of pensions to dependants of deceased members of the force 20,605.

Cutting Hospital Cost For Poorer Patients

Chicago Doctors Have Adopted Plan For This Purpose

A group plan, assignment for nurses has been hit upon by the Chicago Medical Society, as a means of cutting nursing costs in hospitals for persons of low means. Nurses will be assigned to full time, half-time or group duty as the doctors deem individual cases demand.

The council agreed that on many cases a nurse is occupied by duty only a fraction of the time, and is really "on call" rather than "on duty," and decided that the demand for special nursing in Chicago is "to be a considerable degree artificial."

Physicians said that the wealthy are able to pay for one or more nurses for each patient, and that the hospitals are providing excellent free care for the poor, so their object was to aid the moderate income class.

A Soviet Mercantile Fleet

British shipbuilding interests, Soviet newspapers report, that an approach the government with an offer of \$400,000,000 credit for a period of ten years for the construction of steamers in British shipyards for a Soviet mercantile fleet. No conditions of such an offer, however, could be obtained in British circles.

It sometimes happen that a man is kept from buying mining stock because he hasn't got the ready cash.

Thousands Of Reindeer Starving In Lapland

Are Facing Extinction Owing to Hard and Early Winter

While children all over the Christian world were dreaming every night of the advent of Santa Claus in his sleigh drawn by a team of reindeer, it is reported from Lapland, in the north of Scandinavia, that 35,000 of these animals are starving and the breed there is threatened with extinction.

The same early winter that has driven scores of white Arctic owls from Greenland and Iceland to the Atlantic shipping lanes, and even as far south as New York, has barred Northern Europe in snow several feet deep, making it impossible for the reindeer to find food in their native haunts.

A cable despatch from Stockholm tells of a herd of 6,000 starving reindeer, which invaded a Lapp village with savage ferocity, driving out the inhabitants and wrecking everything in their path. When the animals had withdrawn the village was in ruins and every bit of grain, flour, bread and vegetables had been devoured by the reindeer, which usually are extremely tame, even shy.

A German expedition recently sent to Lapland to study the question of whether there was any real danger of the reindeer becoming extinct, just as the Lapps are slowly but surely dying out, found about 170,000 reindeer in those parts of Scandinavia. Thousands of others, of course, may be found in Alaska and the countries north of the Arctic Circle.

Although in Lapland the natives claim all the reindeer as their property, there are many herds of these animals that roam the mountain fastnesses without restraint and keep away from the Lapp settlements for years.

These reindeer, the so-called "forest reindeer," are beasts that have been driven south by hunger, even so far south as the Swedish province of Norrland, despite such natural obstacles as steep, rocky mountain ranges and broad rivers.

The present winter season started many weeks ahead of time after a cold summer during which the vegetation was sparse. The first snow fell in August, and early in September the lowlands as well as the mountainous regions were covered with deep snow, on which a hard crust of several inches formed after days of severe cold weather.

The result was that the reindeer were unable to penetrate the hard layer of ice that covered up all their food, and their migration south started.

Canada's Climate Defamed

No Other Country Has One That Is Superior

There are days of extreme heat and days of extreme cold in Canada, but in an average twelve months the Canadian climate compares favorably with that of any other country. There is no such certainty of fair weather and continuous comfort. We seem to have accepted an adverse judgment upon the Canadian climate without thought or protest. We have not stopped to think that few countries have such long seasons for moderate temperature in which it is a joy to be out of doors under clear skies and in kindly sunshine. It is better to have the cold days of Canada than the climate of Queensland and the long periods of distressing heat in other parts of Australia. There is, however, a common notion that the climate of Australia is infinitely superior to that of the Dominion. The truth is that the Canadian climate is condemned chiefly by Canadians who have not lived in other countries and by the people of other countries who know nothing about Canada.—WILLIAMS MONTHLY.

Agent Had Right Idea

Did Not Spell Christmas Happiness For Small Boy

He had ruled a mahogany table top before he called attention to what he was doing by asking the clerk for season's greetings envelopes to match the decorative tops of the Canadian Pacific Telephone forms which he had separated from a dozen blanks with an old jack knife. He wanted to send one to teacher and one to each of his particular friends. They were red and blue and green and looked for all the world as if they were Christmas cards. The telephone agent looked at the table top and looked at the kid. The boy won. His feet were wet, his hands blue, his overcoat a reach-down, and his age eight or ten. He left the office dirty as to the good, and never saw the Canadian Pacific representative carry an inch. "To register your table top," is the Christmas spirit.

What this country really needs is water-proof toast to put under pocketed eggs.

New Use Of Air Power

Plays Important Part in Operation of Oil-Electric Locomotive

Air power, employed in many and increasing ways in modern industry, has become a new energizing force in rail transportation. It now plays an important role in the operation of the oil-electric locomotive, the latest hauling power on the track. For a quarter of a century railroads have used compressed air as

The Vermont Oil Co., with a capital stock of \$200,000 divided into shares of \$1 each has applied for and received incorporation from the Dominion Government. The headquarters of the company is at Vermont, Saskatchewan.

Partners residing within a few miles of Prince Rupert, B.C., have become members of the Alberta Wheat Pool and have signed contracts to ship their grain through the pool. A sample of wheat from that district graded No. 1 Northern.

Canada's employment index number stood at 101.3 on December 1 last, as compared with 102.8 in the preceding month, and 95.3 on December 1, 1925. Despite the seasonal curtailment registered on the first of the month, however, employment continued at a higher level than in any month of the years 1921-1925.

Osburn College, Isle of Wight, is to become a training centre for emigrants for the Dominions, under the joint auspices of the Y.M.C.A. migration department and the Canadian Council for Empire Settlement. It is hoped to give a preparatory training to 2,000 men and boys yearly for life in the Dominions.

Placing The Responsibility

Stresemann Admits Conference Rescued by Germany Would Have Averted War

People who are so sure that the League of Nations is a big fizzle—there are many such people at Washington and elsewhere round the conference—may well ponder the declaration of Foreign Minister Stresemann of Germany the other day. Mr. Stresemann, whose government opened the famous hall in August, 1914, after refusing to take part in a conference proposed by Sir Edward Grey to patch up the Austro-Serbian row, thinks that the work of the league thus far has made another great European conflict impossible, and goes so far as to declare:

"If the statesmen could have met for four or five weeks in 1914, just as the foreign ministers met in London and Geneva, and discussed the situation frankly and unreservedly, I am convinced that the great war would have been averted."

Well, that was a costly lesson for Germany and the world. But if Mr. Stresemann sees it as a lesson, let it be a serious reflection on Americans who insist that the league is merely a means of making trouble as Mr. Hearst, for example, teaches?

Incidentally, what does Stresemann's admission do to claim that Germany was no more responsible for the war than anyone else? If a conference would have prevented the war, then Germany caused the war, for it was Germany that blocked Grey's plan for a meeting of the diplomats. It will not be easy to get around that—Dixey Press Files.

First Duty of Newspaper

A newspaper is of necessity something of a monopoly, and its first duty is to shun the temptations of a monopoly. Its primary office is the gathering of news. At no point, however, must it see that the supply is not tainted. Neither in what it gives nor in what it does not give, nor in the mode of presentation, must the unclouded face of truth suffer wrong. Comment is free, but facts are sacred.

Loose Clothing Is Warmest

Permits Zone of Warm Air to Circulate Around Body

It is because vitality varies considerably between individuals that some of us are cold more than others. But many are cold because they don't know how to keep warm.

If two persons, of equal vitality, went out on a cold day, and one was wrapped up in heavy and close-fitting garments and the other wore loose clothing of medium weight, the latter would be far warmer. Clothes have a threefold function. They intercept a breeze to the outside air; they should conserve, within ventilation flaps, the warmth generated in the body, and (when loose) permit a zone of warm air to form between the body and themselves. In woollen clothing, too, the fabric, if loose—a tight vest is not half as warm as a loose one—gathers in its cells pockets of warm air. Further, heavy clothing saves vitality and that instantly makes the body more susceptible to cold. So—loose clothing for warmth. Make the practical test of wearing a sweater in tight folds, and then loosely.

Have To Be Linguists

Telephone Operators in Jerusalem Familiar With Eleven Languages
Telephone users in Jerusalem can ask for their numbers in eleven languages and the exchanges will put them through.

Writing in the monthly Telegraph and Telephone Journal, L. M. Smith, superintendent of telephones in Palestine, says:

"Palestine has in addition to the three official languages (English, Arabic and Hebrew), several other languages in common use, such as French, German, Spanish, Greek, Italian, Russian, Armenian and Rumanian.

"There is a formidable list, but a caller in any of these languages can be served without much trouble in a Jerusalem exchange, where each of the telephoneists speaks at least three languages well and can deal with simple demands for numbers passed in five or six different tongues."

IDEAL FASHIONS
Paris-Belle-Époque

What Prices And Their Lesson

Wheat has unconsciously been called the "staff of life." It is the great commodity upon which the world has mainly depended for sustenance since the days of ancient Egypt, and as centuries roll by and the population of the world increases, and with it the pressure upon food resources, and economies in consumption become more urgent, the reliance upon this cereal will become greater and greater. No substitute for wheat has ever been discovered or developed. On the contrary, the great rice-eating nations, with their teeming millions of humanity, are beginning to turn to wheat consumption at an ever-increasing rate. The future for wheat is assured. No other crop can, without a comparatively enormous outlay, be grown in as much food value per acre as wheat. And food value is what the population of the world will pay for in the future.

There is no subject which interests the Canadian farmer more than the price of wheat, and there is no commodity more ancient and more bewildering historical record. From the beginning of the thirteenth century up to about 1575, wheat sold in the British market all the way from seven cents up to forty-five cents per bushel, the average being about thirty cents. Prices then rose rapidly, and in 1595, we apparently enter a new era as we encounter, for the first time in human history, "dollar wheat." During the seventeenth century the average price of wheat was \$1.17 per bushel. During the eighteenth century, \$1.20, and during the nineteenth century, \$1.75. As we enter the twentieth century, the average was \$1.25 per bushel. In the period 1922 to 1929, wheat only fell below the dollar mark during four years, the average being about \$1.25. Average wheat prices did not go below the dollar for any single year.

Then came the great agricultural tragedy of the twenties. With cheap transportation on land and sea, Canada, the western United States, Australia, New Zealand and the Argentine were opened up for settlement and a human flood reached the shores of these countries, resulting in the easy exploitation of virgin lands, and an enormous volume of wheat was poured on to the world's markets, with the inevitable result that, between 1926 and 1932, wheat touched a dollar, average only three times. In other words, world agriculture was, by the law of supply and demand, forcibly placed in the economic position of the Middle Ages, as wheat is more or less the barometer of the general agricultural price level. Owing to this oversupply, foodstuffs went on the bargain counter.

Since that disastrous period, and in conformity with the rapid increase of world population, due to cheap food, there has been a steady upward swing toward normal. From 1914, wheat prices in Liverpool advanced as follows, by years:

1916, \$1.61, 1917, \$1.58, 1918, \$2.19, 1919, \$1.73, 1920, \$1.47, and 1921, \$1.24. In 1924, the price of December wheat was \$1.38, and since that time the price has steadily increased as population has overtaken food supply.

Quite aside from the economies of the wheat situation, there is nothing in history to warrant the belief that minimum prices will not remain permanently on the fairly satisfactory basis of the last two years, which will ensure reasonable agricultural prosperity to all wheat producing countries. There are brighter days ahead for Canadian agriculture. History proves the case unmistakably. What Canada now wants is a largely increased agriculture to balance our overgrown towns and cities.

Received Magnificent Flowers

Christmas Victoria once received as a Christmas offering from that famous horticulturist, David Fuestenberg of Philadelphia, a bunch of twelve magnificent Queen of Edgemoor roses, each flower being eight inches in diameter, with a stalk a yard long. The roses, one of this gift was the flowers arrived in perfect condition after 3,000 miles. Each stem had been placed in a separate sealed tube of water, each and wrapped in wax paper, and the whole buried in cracked ice and moss.

A lover of a former day would thus describe his fiancée: "She's quiet and timid as a mouse, and wonderful about the house." Whereas, a sleek would say right now: "I'll tell the world my girl's a wow. A classy kid, just full pop. T'guyt ta see that baby step."

Forests once covered 822 million acres in the United States. About 25 per cent of this area has been re-forested.

And you may sometimes judge a man by the company that doesn't keep him.

Good Reasons For Advertising

Southern Newspaper Gives Eight That Should Be Convincing
An enumeration of the reasons for advertising has recently been given out, says the Kingston Whig-Standard. There are eight reasons advanced, but there are many others, of course. However, here are eight that are very splendid and highly convincing, as given in a southern newspaper:

Newspaper reading is a universal daily habit; newspaper, therefore, reaches each day virtually all who buy.

Newspaper advertising is the life blood of local trade because it teaches all consumer sources in every community. It gives the national advertiser the same opportunity for complete consumer appeal in any locality.

Newspaper advertising cuts selling costs because it entails no waste in locally of circulation. Manufacturers use it to cover markets where it is profitable to do business.

Newspaper advertising insures quick, thorough and economical dealer distribution and dealer goodwill, because retailers are willing to sell products advertised direct to their own consumers.

Newspaper advertising enables manufacturers to tell where their products may be bought.

Newspaper advertising can be started or stopped over night, can be prepared between days, to meet certain developments and to obtain immediate results.

Newspaper advertising enables manufacturers to check advertising while they enter.

Newspaper advertising costs less than any other kind.

The merchant or other business man who takes advantage of the opportunities offered by newspaper advertising to boost his business during the Christmas season will be able to face the question of advertising in February without undue worry.

Hospital Was Never Used

Building at Dundalk County, Ireland, Has Been Demolished

A hospital that has never had a patient in it is to be demolished at Dundalk, Co. Louth, transferred to another town in the same county, and used as a sanatorium.

The hospital owes its existence to a panic twenty years ago. A foreign vessel coming into the harbor hoisted the flag for a pilot. By mistake a yellow flag was put up. The port authorities came to the conclusion that there was a plague on board, and there was great excitement.

Publication of the facts of the mistake failed to allay altogether the fears engendered, and airport inspector suggested the erection of an isolation hospital. From the day the hospital was built the authorities have maintained it and a staff.

Uses American Slang

American slang has become a part of everyday speech of Anton Lang, the "Christus" of the Passion Play at Oberammergau, said Prof. G. M. Conley of Wesleyan University. The professor visited Lang while in Germany last summer and noticed that while he spoke excellent English he frequently used with evident delight many colloquial phrases which he had garnered while in this country.

Giddy—"Why dear, you talk as if you didn't like me! You know I do anything to please you."

Folly—"Well, if you really want to please me stick your hat under a steam roller. And don't take it off!"

Crackman—"I cut through the outer door with an oxyacetylene torch and then used dynamite."

Judge—"Two years. Wait a minute—could you get a clinker out of my furnace for me?"

Frostbites.

SUNDAY SCHOOL LESSON

JANUARY 9

THE STANDARD OF CHRISTIAN LIVING

Golden Text: Ye therefore shall be perfect as your heavenly Father is perfect.—Matthew 5:48.
Lesson: Luke 6:27-35.
Devotional Reading: Matthew 5:1-10.

Explanations and Comments

1. The Law of Love, verses 27-31. See Matthew 5:39-41; 7:12; 5:42-48.—"But I say unto you love your enemies." He ruled by a love in his treatment of them. At the same time when Jesus uttered these words, revenge wreaked upon an enemy was considered noble. Recall how Nero gloated over the misfortune of his enemy; he thought himself fortunate in his despatch that he could say no one had done more good to his friends nor more mischief to his enemies.

"The golden rule" given in our text is carefully chosen. It is not demanded that we should love our enemies with a natural and spontaneous affection (philias), but with a supernatural Christian love that comes by grace (agapan). Expositor's Greek Testament.

We all agree with Francis de Sales who says: "It is easy enough to love those who are agreeable and obliging—what is not attracted by sugar and honey? But to love one who is cruel, perverse, throned, is an unpleasant process as chewing pills." Nevertheless, this is the real touch of brotherly love. The way to practice it is to put ourselves in thought in the place of the one who tries us or mistreats us, and to see how we would wish him to treat us if we had his defects and misunderstandings.

We should love our enemies, but Dr. Shaler Matthews is right in saying that love for our enemies is not moral.

The deodens or indignation against the crimes they perpetrate.

Great Britain's Health

Program Brings Results

Best Conditions of Longevity Occur Among English-Speaking People

According to a report article on "The Economics of World Health," Britain is entitled to the credit of developing the first modern public health program. So it is not surprising to find that among the English-speaking peoples the very best conditions of longevity have been secured. It is in faraway New Zealand that the longest average lifetime is found. The expectation of life at birth is more than 62 years in that country, and only a little less in Australia. The Scandinavian countries, Denmark, Norway, and Sweden, which very early applied the proper health-produce, have conditions very much like those of the United States, perhaps even a shade better, namely, an average expectancy at birth of about 58 years. Britain is not far behind, with an average of 55 years; France, Germany, Italy and Japan before the war had expectations varying from 45 to 48 years, or about ten years less than in the United States. India stands next to last of the list of the countries of the world, with an expectation of about 25 years.

A plating industry

One Factory Turns Out Ten Million Pins a Day

One of the specialties of the world is certainly the pin. In astonishing quantities they pour from numerous factories. One mill alone is credited with turning out nearly ten million pins a day.

A pin is a thing, which in the ordinary way, would last for years, and it is a problem to account for the necessity for making such enormous quantities.

The explanation is undoubtedly that pins are so cheap that everyone throws away or loses them as fast as they use them. Thousands and thousands of them enter the sewers of our towns, and solid masses are often found when numbers of these tiny articles have become welded together in their passage through the sewers. The output of a pin factory includes dozens of different sizes, from the tiny pins used by naturalists, only 1/4 inch long, to giant blanket pins, four inches in length, and nearly as thick as a wire nail.

All pins are made by automatic machines, which convert the iron wire into pins in a single operation.

"Flying Flat" Is Latest
A "Flying Flat" is shortly to be tested off the coast of England by Captain F. E. Courtney, one of the most famous test pilots in England.

The machine, a huge super-aeroplane, will include a kitchen, sleeping accommodations and living rooms. It will take a crew of five to operate, including one man who will function in the triple capacity of cook, houseman and mechanic.

By increasing the amount of moisture in the air during the winter, the wilting of plants indoors can be avoided.

Muskats a Nuisance

In Czechoslovakia

Imported by Naturalists Are Destroying Property and Injuring Houses

How dangerous is the process of introducing foreign varieties of birds and animals among the indigenous fauna of new countries has been strikingly illustrated in the experience of Australia and the United States. Conceivably the idea behind the liberation of rabbits in Australia and of English sparrows south of the border was kindly intentioned, but the result in both cases has not been welcomed in either country. A similar experience has been undergone in Bohemia, where twenty-two years ago a batch of American muskrats were permitted to take up their residence. That, of course, came at a time when Bohemia formed part of the Dual monarchy of Austria-Hungary, now it survives in Czechoslovakia. One of the great estates of the district was owned by Prince Colloredo-Mannfeld. The Prince was a naturalist with a great idea of increasing and varying the fauna of his country by introduction of wealth-producing animals. After studying the creature in the United States, he decided that what Bohemia needed was muskrats. A collection of them was made for him, and with considerable pride he turned them loose along his streams, ordering strict protection for them in the hope that they would breed and thrive.

They did both and took kindly to their adopted land. The next report of their progress came in 1914 from the American consul at Prague. Their number had then increased to more than 200,000; they were spreading over the most fruitful sections of Bohemia and entering houses in Prague; they were undermining dams and dikes of fish ponds, working havoc with the poplars, eating up grain, carrying off chickens, and eating up vegetables and stealing eggs. Appeals were pouring in to the Minister of Agriculture for assistance in exterminating the ravages.

The next report came in a dispatch from Berlin the other day, and reported that the muskrats, having crossed the border of Czechoslovakia, had invaded Bavaria and Saxony and were marching on to Berlin. In fact, they were now in Berlin, the chances are that they will reach there.

Many Foreigners In France

Figures Show Foreigners Comprise One-Twentieth of Population

Foreigners comprise one-twentieth of the population of France, which is now 40,745,551, according to the latest statistics. There are 2,498,250 foreigners in the country, 506,000 of whom live in Paris.

In the Alps maritime province, where Nice, Mentone and other Riviera cities are located, Italians have a majority of 350,000 over all other nationalities.

Culture In New York

The seven theatres that exist in sophisticated New York are, really, only one to a hundred thousand people; there are a score of little towns in continental Europe that are far better provided with drama and music.

The fact is that with all New York's wealth, its cultural facilities are relatively limited; they would be insufficient were it not for the fact that only a minority can afford to enjoy them regularly.

HAD BAD SPELLS

WITH HER HEART

Mrs. E. G. Hall, Bolton, Ontario, writes: "Some time ago I had bad spells with my heart, which were caused by nervousness. I tried everything I could think of, but could get no relief until one of my friends persuaded me to get a box of

MILBURN'S

NERVE PILLS

After I had taken a few boxes I got wonderful relief.

I now weigh one hundred and thirty-five pounds where, before, I never went over eighty."

Price 50c a box at all druggists or dealers, or mailed direct on receipt of order by The E. Milburn Co., Limited, Toronto, Ont.

U. S. PRESIDENT IS OPPOSED TO MILITARY SPIRIT

Trenton, N.J.—President Coolidge has again affirmed his faith in the United States as being "strong enough and brave enough" to take "independent action" to resist "another domination of the world by the military spirit."

Speaking at the Sesqui-Centennial celebration of Washington's crossing of the Delaware, the president said the world has been striving to advance in the direction of peace, to "discard the old theory of relying on force, and to adopt the method of relying more on reason. We are in danger of slipping back into the old formula. The habit and tradition of ages call us in that direction."

While "moral disarmament" is necessary to obtain definite and permanent peace in the world, the president asserted that the attainment of such an object, in view of the present mentality of mankind, would greatly and necessarily be aided by international treaties limiting the "use and size" of armaments.

"I do not believe we can advance this policy of peace by a return to the policy of competitive armaments," he asserted. "While I favor an adequate army and navy, I am opposed to any effort to militarize this nation. When that method has been worked out to its logical consequences, the result has always been a complete failure. We can render no better service to humanity than to put forth all our influence to prevent the world from slipping back into the grasp of that raging system."

Trans-Atlantic Telephone

Fee From London to New York Will Be \$75 for Three Minutes

London.—Trans-Atlantic telephone service which is to be available to the public early in January will cost £15 (about \$75) for the first three minutes of a call and £5 for each additional minute, it was announced today by the postmaster-general.

Various numbers won't count, however, and unless the London "hello girl" gets the particular person asked for in the New York area, to which the service is limited at present, the charge will be £2 for making the attempt. Calls will be limited to 12 minutes when others are waiting to talk across the ocean.

Ghandi Again Favored

Principles Partly Reinstated by National Council of India
Gandhi, India.—"Back to Gandhi" appeared to be the trend of the Indian National Congress, which concluded its session. Among the resolutions was one providing that all the members must wear native dress to make the boycott against foreign cloth effective. Thus the principles of non-cooperation with the British Government and a boycott of foreign cloth, advocated so strongly by Mahatma Gandhi, leader of the Nationalist movement in India, will be partly reinstated after a considerable period in which many of Gandhi's followers rejected his teachings.

Leave on Mystery Survey

Reason for Engineer's Trip North of the Pas Not Known

Saskatoon.—A dispatch to the Saskatoon Star from The Pas states that a mysterious survey party consisting of three engineers, 20 men, six teams and 31 tons of supplies has left presumably to spy out the country between the Limestone River, on the Hudson Bay Railway projected route, and Fort Churchill.

While details information could not be obtained, it was understood that The Pas that a possible route for a short line connecting the present Hudson Bay route to Port Nelson with Fort Churchill would be sought.

Manitoba House Meets Feb. 3

Winnipeg.—The fifth and final session of the present Legislature of Manitoba will open February 3, it was announced by Premier John Bracken. An imposing legislative program awaits the consideration of the members, including amendments to the provincial liquor laws and immigration policy.

Black Plague in Russia

Irkutsk, Siberia.—An epidemic of black plague taking a hundred per cent mortality toll has broken out on the Moosoon steppes near Irkutsk. The government has sent a medical expedition to the stricken area.

W. N. U. 1652

Eckner Will Attempt Non-Stop World Flight

Plans to Use New Zeppelin Now Under Construction

Friedrichshafen.—Dr. Hugo Eckner will attempt a round-the-world non-stop flight with the Zeppelin LZ-127 as soon as it is completed and tested. It has been designed to take "independent action" to resist "another domination of the world by the military spirit."

Speaking at the Sesqui-Centennial celebration of Washington's crossing of the Delaware, the president said the world has been striving to advance in the direction of peace, to "discard the old theory of relying on force, and to adopt the method of relying more on reason. We are in danger of slipping back into the old formula. The habit and tradition of ages call us in that direction."

While "moral disarmament" is necessary to obtain definite and permanent peace in the world, the president asserted that the attainment of such an object, in view of the present mentality of mankind, would greatly and necessarily be aided by international treaties limiting the "use and size" of armaments.

W. N. U. 1652

Woman Will Compete In Quebec Dog Derby

Announces Intention of Driving Ten Labrador Huskies

Quebec.—Mingling through Canadian snows behind a snapping, growling, jostling dog team is a man's job but when the famous Quebec dog derby gets underway this winter, for the first time in the history of the derby, a winsome woman will line up at the starting post with "Canada's best and hardest."

Mrs. Frank A. Wheeler, of North Conway, Mass., has written the officials in charge of the event here, asking for full particulars as to the running of the race, and also for an entry blank.

Mrs. Wheeler has a team of 10 Labrador huskies and expects to finish in the prize money.

Another outstanding figure in the dog world who may also take part is Segalla, hero of the 400 mile non-stop trip to Nome, Alaska, a couple of winters ago, when he mushed that distance with his dogs carrying a load of serum to save the inhabitants of the little mining town from diphtheria.

Segalla is going to run in the New England dog derby, to be run at Berlin, February 16, 17 and 18, and efforts will be made to have him come to Quebec for competition here.

See, and have a try at the rich stakes.

NO AMBASSADOR FROM AUSTRALIA TO UNITED STATES

New York.—"I do not think the time is ripe for the appointment of a minister to the United States, and believe that Australia is well served by the diplomatic corps of Great Britain, without engaging in that expensive amusement herself."

So declared Premier S. M. Bruce of Australia, on his arrival in New York from Europe.

Even the possibility that South Africa may follow the procedure of Canada and Ireland in the appointment of ministers, Mr. Bruce said, would not gauge the program for Australia. He said that there is no real reason for the naming of ministers from Canada to the United States as their adjoining boundaries and their waterways and other problems tie them to their proximity to each other and are frequently best met by diplomatic negotiations. He said the relations between Australia and the United States are at present on a par of a trade basis than a diplomatic one, and for that reason a commissioner best served the purpose.

Mr. Bruce said that among the matters he would invite discussion upon when he visits Washington and which he would negotiate without the aid of any factors were those of good fellowship would be the one of lengthening the period in which Australia business men may visit in the United States without, as he expressed it, awakening one day to find the horrible moment is upon them when they must leave the country.

Friendship With Japan

General Booth Advocates Drawing Together of Eastern and Western Nations

London.—General Bramwell Booth, head of the Salvation Army, returning from his world tour, declared that he could see no greater blessing to the world than the drawing together of the eastern and western nations.

Ten thousand salutations gathered in at Albert Hall to welcome their chief home. He described his travels and experiences, and emphasized his hopes.

"Let us cultivate friendship with Japan, for friendship with Japan is worth to our nation more than any amount of armament."

Alberta Power Problem

Calgary.—Premier Brodie of Alberta, Hon. Charles Stewart and probably Mayor Webster of Calgary, will meet in Ottawa between January 5 and 8 to discuss settlement of the power problem of Southern Alberta, according to information received by Mayor Webster from Mr. Stewart. Among other matters that will be taken up will be that of hydro-electric power development from Spray Lakes in Banff Park.

Decrease in T.B.

Washington.—Americans are dying considerably less rapidly than in the past from tuberculosis, pneumonia and cerebral hemorrhages, but are succumbing more frequently to heart affections, cancer and kidney disorders.

DENY ANY CHANGE IN IMMIGRATION LAWS OF U. S.

Washington.—No unusual tightening of immigration restrictions along the Canadian border has been ordered by United States immigration officials. Immigration Commissioner Hull said, but he pointed out that alien should be prepared to prove their right of residence when they go out and re-enter.

"Unless they have some evidence to submit to immigration inspectors that they are legally entitled to live in the United States," he said. "They are likely to meet trouble and delay. At the very least, they must be able to give information as to the ports through which they first entered this country so that our records can be looked up to make the matter certain."

A despatch from Vancouver said a number of British-born residents of the United States who went to Canada for Christmas had found themselves barred from returning to the United States because of a sudden tightening up of immigration laws. The despatch said many had businesses in Pacific Coast cities and that protests and appeals had been forwarded to Washington.

Prairie Air Mail Service

Conditions in Western Provinces are Ideal for Experiment

Edmonton.—Air mail service for Canada is very probable in the near future, and with an air port already in existence, Edmonton will likely be one of the first cities served in this respect in the west, said K. A. Blatchford, M.P. for East Edmonton, following receipt of a letter from the Postmaster-General of Canada relative to air mails.

"The Postmaster-General has the matter under consideration at the present time, and it has been pointed out to him that there is no better place to experiment with an air mail service than on the prairies," said the East Edmonton member.

Air force officers from High River Field will be in Edmonton early in the new year to carry out a series of experiments in connection with winter flying, and according to air force experts and postal authorities there is little to hinder the establishment of an air mail service across Canada.

Opposes War Debt Agreement

Paris.—Former Premier Ribbentrop fundamentally against ratification of the Washington agreement for funding the French war debt to the United States, he declared in an interview with L'Avenir on the eve of launching his campaign for re-election to the Senate.

Manitoba Oil Well

Yorkton.—Twenty barrels of crude oil from the Rose well in the Grand view, Man., field, were shipped to Winnipeg recently. The oil will be used for exhibition and advertising purposes. It is the first crude oil ever shipped from either Manitoba or Saskatchewan to the claims.

Honor Canadian Pacific Liner

When the Canadian Pacific liner Melita steamed into the harbor of Antwerp towards the middle of November, it was the occasion of a great celebration, for she was the 10,000th ship to enter the Belgian port this year. Never in the history of the port has a vessel been so enthusiastically welcomed. King Albert of Belgium, upon hearing the news, wired his sincerest congratulations to the Burgomaster of Antwerp. The entire city rejoiced and celebrated. Hugo crowds cheered Captain A. H. Nottley of the Melita and his staff as they made their way to a grand demonstration in their lounge at the Hotel de Ville. The historical event was climaxed by a luncheon on board the Melita in honor of the Antwerp personalities. W. D. Grosset, managing director of the Canadian Pacific in Belgium, was nominated as Knight of the Order of King Leopold.

The photograph shows from left to right: W. D. Grosset, Captain A. H. Nottley, commander of the Melita, and Mr. Van Cauwelaert, the Burgomaster of Antwerp.

Specialist Dies At Sea

Dr. Ross Had Done Valuable Work in Cancer Research

London.—Dr. Hugh Campbell Ross of London, director of the St. Stephen's Research Foundation, who had done valuable work in the investigation of cancer, died at sea on his way to England, aboard the liner Narkunda. He was buried at sea.

Dr. Ross, besides being at the head of the St. Stephen's Research Foundation, was Director of the Lister Institute of Preventive Medicine. He was 51 years old, a son of Sir Campbell C. G. Ross, K.C.B. He served in the South African War as a surgeon. While medical health officer at Cairo, under Lord Cromer's Administration in Egypt, he started mosquito extermination there. Since 1919 he had been occupied chiefly with cancer research at the two institutes of which he was director. Several new methods of research were developed under his leadership. He devised several processes for the prevention of industrial cancer.

Gasoline Was Fatal

Constable in Far North Loses Life Through Using Gas for Lighting Fire

Edmonton.—According to word received here from the far north, Constable Frederick H. Hildebrand of the R.C.M.P., used gasoline to light a fire in the barracks at Fort Rae, resulting in his death and injuries to Constable F. L. Armstrong. News of the tragedy was given out at police headquarters in Ottawa, Monday.

Letters from Fort Rae state that Hildebrand was lighting the fire and poured some gasoline on the smoldering wood.

A four gallon can he had in his hands exploded and enveloped him in flames which Armstrong vainly tried to quench, before he could even get Hildebrand outside the buildings were a raging inferno, and everything the men had was destroyed.

Will Continue Arctic Exploration Work

Captain Wilkins Leaves Seattle for North Pole February 5

Detroit, Mich.—To pick up his Arctic exploration work where he left off last spring, Captain George H. Wilkins plans to leave Seattle for the north on February 5.

Two airplanes, the Alaskan and the Detrolter, are stored at Fairbanks, and Captain Wilkins plans to place the wings of the Detrolter on the fuselage of the Alaskan and then fly from Fairbanks to Point Barrow. At the latter point 5,500 gallons of gasoline have been stored in preparation for the flight towards the North Pole.

A series of mishaps delayed the start of the expedition last spring until weather conditions made Arctic flying impossible.

RUM EXPORTERS MAY BE DRIVEN OUT OF BUSINESS

Vancouver.—Although refusing to concede that seizure by Canadian customs of a \$350,000 liquor cargo on the auxiliary schooner Chris Moller will establish a precedent governing future seizures, Vancouver liquor exporters are perturbed, according to the Province.

They see the hand of the Canadian Government extended to help the United States enforce its prohibition laws; and they fear that Dominion customs will in this endeavor, the evasive practices of American liquor enforcement authorities so that what it is impossible to accomplish according to the letter of the law will be brought about indirectly.

To be more explicit, they say that the Chris Moller seizure involves costly litigation, which, with other hazards of the business, would financially ruin exporters and make the game not worth the candle. They are up against heavy expenses south of the international boundary, they point out, and confronted with the same situation here there will be no profit in the business.

When exporters speak of emulating practices of American liquor enforcement authorities they mean that the latter seize, for example, a rum-running ship 20 or 30 miles out at sea, where she has a legal right to be, and then institute prosecution with all its incidents of heavy bail and expensive lawyers which, in the end, breaks the morale of the owners.

Harrassed on both sides of the line, liquor exporters may be driven out of business. The more certain prospect of losses and of protracted litigation are both factors which they are considering.

FAMINE SPECTRE WILL NO LONGER THREATEN INDIA

Ottawa.—"The nightmare of famine in India which previously caused millions of deaths annually has been completely dispelled," Frederick Palmer, president of the British Institute of Civil Engineers, told members of the Ottawa branch of the Engineering Institute of Canada at luncheon here. He said the building of irrigation works throughout the country and network of railroad has altered the famine scare for all time.

Mr. Palmer, who has been engaged by the Canadian Government to investigate the ports of Hudson's Bay in view of the decision to complete the Hudson's Bay Railway to Richelieu, was given a welcome by Richard J. Durey, of Montreal, secretary of the Engineering Institute of Canada. At the head table were Hon. C. A. Manning, Minister of Railways, Hon. W. H. McEwen and Hon. Robert Furber.

The speaker did not discuss in any way his mission to Hudson's Bay, except to remark that a few weeks ago he was looking over harbor works in the Bay of Fundy, and now was assigned "to the Arctic regions." He urged that closer relations should exist among the engineering associations of the world and particularly those of the British Empire.

Mr. Palmer, as consulting engineer for the Government of India, has been associated during recent years in harbor, irrigation and railroad projects in that country.

"The average carrying in India," he said, "for carrying goods of all classes on the railroads is one cent per ton-mile. Coal is carried at one-half cent per ton-mile. Third class passengers who account for 56 per cent of the passenger business, are carried at two-thirds of one cent per mile. The policy of the Government is one of cheap transportation and as a result millions of tons of freight business have been developed which would not have been carried under a higher rate."

Taking Long Journey To Observe Eclipse

Group of Scientists Will Go To Norway in June

Philadelphia.—An expedition will be made to Norway this coming summer to engage in scientific work confined to the brief space of one-half minute.

This was announced by Professor S. A. Mitchell, director of the McCormick Observatory, University of Virginia, speaking before the American Astronomical Society. The expedition is to observe a total eclipse of the sun, June 26.

"The path of totality will pass across the North of England early in the morning," said Prof. Mitchell, and soon after will reach Norway, and then continue on its way to the Atlantic Ocean and Northern Siberia. It is the first total eclipse that has visited the British Isles in more than a century. The shadow will barely touch the earth's surface, with the result that totality will last only 26 seconds.

"The expedition is going to Norway rather than to England, because of the promise of better weather conditions."

131 Divorce Cases

Ottawa.—There are 131 applications for divorce awaiting the reopening of Parliament in February. Of these, 121 are residents of Ontario and ten from Quebec. Most of the other provinces have divorce courts of their own and do not come to Ottawa to have marriages annulled.

Ratified by Senate

Mexico City.—The Mexican Senate ratified the British-Mexican claims convention for revolutionary damages suffered by British subjects from 1910 to 1932. The Senate also amended the existing treaty of commerce between Mexico and France.

Canada Extends Sympathy

Ottawa.—An expression of profound sympathy with the people of Japan in the death of Emperor Yoshihito was extended on behalf of Canada by Premier Mackenzie King in a letter written to the Japanese consul-general at Ottawa.

U. S. Steam Founders

Paris.—A telephone message by way of Berlin to the Paris Mail says the United States steamer Astoria has foundered in the Black Sea, near Kayama, Rumania, with the loss of 21 lives.

The cost of a horsehoe in Germany now equals the value of the horse ten years ago.

The Life Of Farm Machinery

Much Shorter in West Than East—owing to Larger Acreage

About two thousand farmers returned replies to a recent questionnaire on the life of farm machinery issued by the Dominion Department of Agriculture, and the answers provide an interesting and valuable fund of material on the immediate subject. From a summary of the replies published in Seasonable Hints it appears that the range of age runs from 16 to 25 years for common implements in the eastern provinces to a generally much shorter period of use in the prairie provinces. This difference is explained by the greater acreage worked in the west, the average acreage of arable land among the farms included in the Eastern reports being 76 acres while in the case of the prairie farms 291 acres was the average.

According to the information given in the replies, the annual cost of general farm machinery per acre of cultivated land was \$1.26 on the prairie and \$2.45 in Eastern Canada. This cost includes depreciation, current interest, repairs and housing. The smaller cost on the prairies is due chiefly to larger-sized farms which permit each implement to cover a larger acreage in a year. It is due also to the greater annual use of machinery on the prairies that their life there is shorter than in Eastern Canada. The figures for average cost indicate that the increased depreciation in the west is offset by extra use obtained annually from machinery on western farms.

The advantage of larger acreage in machine economy is further proved by estimates of the expense incurred by machinery in crop production in the two regions. In the prairie provinces the total cost of wheat would be approximately \$16 per acre, of which \$1.36 or 8.5 per cent would be charged against general farm machinery. In the eastern provinces the cost of production a crop of oats would be approximately \$29 per acre, of which \$2.51 or 9.8 per cent would represent the machine cost.

These figures indicate the economy of working larger acreages. Probably a still larger average acreage than shown for prairie farms would effect still further economy. Many farms in Eastern Canada carry a burden of capital expenditures in machinery quite out of proportion to the acreage cultivated and the possible production, thus involving a burden which would not be tolerated in efficient factory industries. Many practical difficulties lie in the way of applying the close principles of modern industrial business to agriculture. Yet the day must come when farming will be organized on a basis of size units and equipment attaining efficient production in relation to operation costs much as other industries are now organized.

Retrospectively the ill-fated results of your hour concerning others is not worth remembering.

W. N. L. 1924

Salaries of Aviator Postmen

In Addition to Regular Pay They Receive Mileage

The hire of flying birds is money rewarded at least for the air mail pilot. The aviator postman receives an annual salary of between \$1,000 and \$2,000. The high pay, plus the desire for excitement, recently caused two field superintendents of the service to desert ground jobs and return to piloting. Both now fly on regular mail routes.

The mail pilot receives a base pay of between \$2,000 and \$3,000, depending on length of service, and in addition by the mile for flying service. For daylight flying he receives a five-cent rate between Cleveland and Cheyenne, six cents between Cheyenne and Reno, and seven cents between Reno and San Francisco. For night flying the mileage scale is doubled.

The hazards of mail piloting are held by postal officials to justify the pay.

Dickens' Christmas Carol

Original Manuscript Once Sold to Bookstore for \$250

H. P. Dickens, K.C., tells an interesting story concerning the original manuscript of his father's famous Carol. The novelist presented the manuscript to Thomas Milton, an old schoolfellow, in 1875. Mr. Milton sold it to Francis Hargrave, a bookseller for \$250. Then it passed into the hands of George Churchill, an antique and autograph collector. Mr. Churchill treasured it until 1882, when circumstances compelled him to part with it. After photographing every page of it, it was sold to Mr. Bennett, a Birmingham bookseller, and curio dealer, who eventually found a purchaser who readily signed a cheque for \$1,000 for it. Finally it was bought by Stuart M. Samuel, of Kensington Palace Gardens, for \$1,500, who is said to still retain the precious document.

A MEDICINE THAT ALL MOTHERS PRAISE

Baby's Own Tablets Banish Babyhood and Childhood Ailments

Mrs. H. Oakes, Santa, Ont., says: "I have used Baby's Own Tablets in my home for the past fifteen years and I believe the most healthful children I have ever known are entirely due to this medicine. The Tablets are helpful at feeding time; relieve colic and are always beneficial in the milder ailments of little ones. I have recommended Baby's Own Tablets to other mothers whose experience with them has been as satisfactory as my own."

Baby's Own Tablets do one thing only, but they do it well. They act as a gentle laxative which thoroughly regulates the bowels and sweetens the stomach, thus banishing constipation and indigestion; cures colds and simple fevers and turns the cross, sickly baby into a well, happy, laughing baby.

Baby's Own Tablets are sold by medicine dealers or direct by mail at 25 cents a box from The Dr. Williams' Medicine Co., New York, Ont.

Will Standardize Language

Radio may do what all other forms of communication have failed to do—standardize pronunciation. At least great things in that direction are looked for by Sir Richard Paget, Fellow of the Physical Society of London, when radio was associated with standard speech. He said, "English language would become almost the universal language of the world."

Always Double Liability

Home Bank shareholders did not have a ghost of a chance to escape double liability when the matter came into court. Purchasers of bank shares do so with their eyes open. If anything happens to the bank, they are liable for twice the amount of their shares. However, most people would take that chance on the stock of the Canadian chartered banks of today.

An Expensive Order

Some time ago an English firm in the Midlands received an order from a millionaire to manufacture a box of crackers of special design. The box had to be placed in the hands of a jeweler to be made for the customer had stipulated that it was to be a handsome silver casket. Inside the casket were placed six crackers, the wrappers being of figured silk and old lace. The box of crackers cost \$1,200.

Learned Braille System

Lord Grey of Falbrook can read in the dark as well as in the light. When he was threatened with blindness he learned to read by the Braille touch system, and now, with his eyesight much improved he still finds Braille books useful. "One can turn out the light," he says, "draw up the shades and literally read one's self to sleep."

"As a man (blind), so he is," claimed the minister.

"I don't know about that," replied the merchant, "many a man thinks he is the best of his kind when he is really nothing but a snail."

Use Cuticura To Heal Slight Rashes

Before they become serious skin troubles. Bathe with Cuticura Soap and hot water, dry gently and anoint with Cuticura Ointment. Daily use of Cuticura Soap, assisted by the Ointment when required, keeps the pores active and the skin clear and healthy.

Sample Card Free by Mail. Address: Canadian Branch, Cuticura Sales Co., 1000 University St., Montreal, P.Q. Cuticura Soap and Ointment, 25c.

Children's Colds

Architect treated externally. Coughs that won't clear up by rubbing Vicks VapoRus chest at bedtime.

VICKS VAPORUS

Canada's Sugar Production

Total Manufactured During December Much Higher Than Last Year

Canada exported 22,765,000 pounds of refined sugar during the month of November, 1924, as compared with 2,890,700 pounds for the corresponding month a year ago. The report of the Dominion Bureau of Statistics states: Of last month's exports, France received the most, a total of 5,660,200 pounds, valued at \$172,776. Uruguay took a slightly less quantity, 5,600,600 pounds, valued at \$187,356. The United Kingdom was third, receiving 3,175,900 pounds, valued at \$141,695. The total value of the refined sugar exported was \$924,105.

The imports of refined sugar for the month of October, the latest for which figures are available, were 2,096,200 pounds, as compared with 1,887,264 for the month of September, 1923.

Total amount of sugar manufactured in Canada for the four weeks ending December 1, 1924, was 112,200 pounds, as compared with 97,173,252 for the corresponding period in 1923.

Had Remarkable Cruise

Dutch Submarine Beats All Records for Non-convoyed Voyages

A wave of enthusiasm spread over this city when a report was received that the Dutch submarine K-13 had beaten all records for non-convoyed voyages by reaching Soerabaya after 196 days at sea.

The K-13 is a boat of 520 tons. It left the naval base at Nieuwediep on May 27 for the Canary Islands.

After a voyage of 2,299 miles to Curacao, it proceeded to Panama and was the first foreign submarine to penetrate the canal under its own power. From Panama the K-13 proceeded to Mazatlan, then to San Francisco and across the Pacific to Honolulu and Guam. It covered the 2,299 miles from Honolulu to Guam in nineteen days.

Between the start of 1924 and October 1, 1924, the submarine used 206,000 H.P. of fuel oil and 7,500 H.P. of engine oil.

Little Helps For This Week

I trust in the mercy of God for ever and ever—Psalm 118.

For us, whatever's undergone.

Then knowest, whilst what is done;

Grief may be joy misunderstood.

Only the good discerns the good.

I trust Thee while my days go on.

I praise Thee while my days go on.

I love Thee while my days go on.

Through dark and death, through fire and frost.

With emptied arms and treasure lost.

I thank Thee while my days go on.

—Elizabeth Barrett Browning.

It is the Lord, he led him do what seemed good. Our part is to pray that we may bear patiently whatever the Lord may be allotted us, firmly trusting in His word that all things shall work together for good to them that love Him.

—Hannah More.

Canadian Swine Breeders

Offered record of the month vote for the election of directors for the Canadian Swine Breeders' Association.

In the year 1927, taken in accordance with section 6 of the Constitution of the Canadian Swine Breeders' Association:

Maritime Provinces: A. G. Dickson, Box 494, Chatham, N.B.; Manitoba: Andrew Graham, Robins, Manitoba; Saskatchewan: Philip Leach Baring, Sask. C. M. Leathem, Dept. of Public Works, Regina, Sask.; British Columbia: Angus L. Hay, Cranbrook, B.C.

Justice—"What do you mean by hitting this officer in the nose?"

"I thought he was this, your honor, I meant to hit him in the eye, but he dodged."

Which some people and they will be found wanting in everything except weight.

Minard's Liniment—ever reliable.

Most men find it easier to take two steps backward than to take one forward.

Whether the corn be of old or new growth it will yield to Holloway's Corn Remover.

In one week-end in the northeast of England, 6,000,000 bricks can be produced in twelve minutes.

For Galls—Minard's Liniment.

Rays To Raise Chicks

Ultra Violet Rays to be Used by University of Saskatchewan

Ultra violet rays will play a big part in the raising of Saskatchewan chickens for exhibition at the world's poultry congress to be held at Ottawa next July.

Equipment, which is being purchased by the University of Saskatchewan, with funds provided by the Saskatchewan department of agriculture, will include cells in which to cover a chicken run in the chicks, raised in the sandy grounds from eggs supplied by poultry breeders in the province to enable them to have young stock suitable for making an exhibit at the congress, will be kept. This plan is used to let ultra violet rays into the chicken run.

A quartz mercury arc lamp for getting the ultra violet rays inside the chicken house where the birds will sleep is also being purchased. This method of raising chicks in winter has been proved successful from an experimental point of view, but it is not economically practical at present.

Feels It a Burden

Normandy Town Has Only One Bath.

room But Declares It Useless.

Merica, a little town in Normandy of 1,695 population, has a bathroom on its hands and doesn't know what to do with it. This modern convenience (the only one in town) is in the superstructure which Parliament recently discontinued along with many others as part of its economy plan.

It was installed at the department's expense, and M. Giroult, Councillor-General of the district, now complains to the Prefect that the bathroom has become a useless burden.

Twenty-two pounds of sugar can be made from a bushel of corn by a new process used by the Department of Agriculture.

At the age of 36 a girl knows a lot more about men than a man at the age of 40 knows about women.

Listen!

Have you heard about Peps? Peps is a scientific preparation put up in capsule form, which provides an entirely new and effective treatment for coughs, colds, chest and throat troubles.

Peps contains certain medicinal ingredients, which, when placed upon the tongue, immediately turn into vapor, and are breathed down the air passages to the lungs. On their journey, they soothe the inflamed and irritated membranes of the bronchial tubes, the delicate walls of the air passages, and finally enter and carry relief and healing to the lungs.

While no liquid or solid can get these Peps capsules get there direct, and healing commences.

FREE TRIAL

Write for a free trial article, write across the name and date of this paper, and mail it (with 1c stamp to pay return postage) to Peps Co., Toronto. A free trial packet will then be sent you. All druggists and stores sell Peps. 50c box.

Peps

Grow Figs on Vancouver Island

Ripe figs of delicious flavor have been grown in southern parts of Vancouver Island and supplied to local consumers. The fruit finds a ready market and one grower is preparing to increase this plantation in the spring. The Georgia Road district appears to be the best location for fig trees, but some good fruit has also been produced at Mill Bay this summer. The fig bears two crops in the season but the late crop does not ripen.

Some people would have to work overtime if they practised hard to what they preach.

A woman is always contrary enough to agree with a man when he doesn't want her to.

When Buying Bread, Meat and Other Foods

This Trade Mark Is Your Protection

You will find that all of the best Bakers wrap their products in waxed paper in order to keep them clean and fresh, and they use Appleford paper because of its absolute purity.

Look for the Appleford trade mark on all the Bread you buy—it ensures you of getting clean, fresh, wholesome food.

When buying Waxed Paper for household use be sure and ask for Para-Sani put up in rolls or sheets.

An excellent specimen of bull
moose with an antler spread of 43
inches was secured recently in the
woods of Nova Scotia by James W.
Stubber, sportsman-editor of Colum-
bus, Ohio, who headed an expedition
into Nova Scotia for the purpose of
securing exhibits for the Ohio State
Museum. In reporting on his trip
at the tourist department of the
Canadian Pacific Railway in Mont-
real, where details of the expedition
were arranged, Mr. Stubber stated
that, according to the guide and old
residents in the district where the
moose was killed, it was one of the
finest specimens ever seen in years.

The Winter Sports Centre of America

Winter reigns supreme in Quebec once again. The
romantic and historic city of Quebec gives itself
up as in former years to the invigorating joy of win-
ter sports. They take it seriously there and they
have every reason for doing so. Perhaps at no other
centre on the continent are the conditions so ideal.
Plenty of snow, a keen steady climate, hills to ski
down and great views to be had. The Chateau
Frontenac, owned by the Canadian Pacific Railway
Company, is undoubtedly the great centre of winter
sports in Quebec. The above photograph shows the
huge slide that provides endless amusement for all.
To the left on the heights stands the Chateau, and to
this famous holiday visitors come from far and wide
to take part in the winter festivities.

The first outstanding events are scheduled to take
place during the last week in December. In January
the inter-collegiate ski meet will be held, at which
it is expected, as was the case last season, teams from
many of the Canadian and American universities will
take part. The open championship ski jumping con-
test of the Frontenac Winter Sports Association will
be held in the third week of February, the silver
trophy of which is now in the possession of the Ottawa
Ski Club. There will also be held in February the
ski championship meet of the city of Quebec.

Skating is being specially catered to. There are
being built at present a dozen large open air rinks
in the city, while the Canadian Open to the world
speed skating championships, set for February 4 and
5, will bring the cream of Canadian and American
speed skaters to Quebec.

Entrées are already coming in from eastern Can-
ada and the United States for the fourth eastern in-
ternational dog sled derby to be held February 21-23.
Among those already received are H. J. Sutton, of
Chicago; Ontario Paper Co., Quebec; Price Bros., of

Quebec (two teams); P. J. Malley, Berlin, N.H.; and
the Paquet Company, Quebec. Officials of the Eastern
International Dog Sled Derby Club expect at least
25 of the finest teams on the continent will be entered
this year.

Much earlier than this, however, the famous Du-
ferin Terrace toboggan slide will be in full operation
well in advance of the Christmas season. A new at-
traction in the form of a sled and bobbed run will
be built by the Frontenac Winter Sports Association
on the old city walls and will finish on the Esplanade.
Visitors will, therefore, be able to enjoy this ex-
citing sport without even going outside the limits
of Old Quebec.

Hockey will provide the most rabid fan with all
he can desire. The new Quebec team, "The Bulldogs,"
will put a strong line-up in action against a United
States circuit, including New Haven, Springfield,
Mass., Providence and Boston. In the new Quebec
American League, "Sons of Ireland" will face
the amateur ranks, and a sterling team will be
playing when the "Bulldogs" are out of town, while
there are also teams running in the Quebec City
League, Nationale League and others.

The curling bonspiel in February will bring risks
from all over the continent to "Queen" for the hand-
some trophies up for competition. Nor should the
snowshoe clubs be forgotten, of which Quebec City
possesses eight. Their spectacular appearance in the
old-line French-Canadian costumes add greatly to the
picturesqueness of the city and to its appeal to
visitors.

The Quebec Winter Sports Association, under
whose auspices the season will be operated, have
already subscriptions in excess of \$10,000 in dona-
tions from citizens, which will go far towards assuring
a successful season.
